## OBJECTIVE

Software Developer at The Outsource Pro with hands-on experience in Java and full-stack, automation-based projects. Currently working on real-time client applications involving debugging, maintenance, and production support. Pursuing MCA specializing in AI/ML, with growing project experience building AI-integrated applications. Seeking to enhance backend and AI-driven development skills and contribute effectively to scalable software solutions.

## EXPERIENCE

**The Outsource Pro — Bengaluru, Karnataka** 4th February 2026 – Present

*Junior Software Developer*

- Working on real-time enterprise automation project for international (Australian) clients.
- Understanding and maintaining existing Java-based application modules and business workflows.
- Handling ATO automation processes and monitoring scheduled executions.
- Debugging issues, analyzing logs, and coordinating with clients.

**The Outsource Pro** 3rd Nov 2025 – 3rd Feb 2026

*Software Developer Intern*

- Worked on frontend development using React.js and JavaScript.
- Built responsive UI components and handled basic state management.
- Developed web pages using HTML, CSS, Bootstrap, and modern JavaScript (ES6 concepts).
- Integrated frontend screens with backend services and tested API responses.

## EDUCATION

**Lovely Professional University (LPU)** Pursuing

*Master of Computer Applications (MCA) — Specialization in AI/ML*

**BBK DAV College for Women** 2026

*Bachelor in Computer Applications — CGPA 8.00*

**BBK DAV College for Women** 2023

*Higher Secondary Education (12th) — 82%*

**Shri Ram Ashram Public School** 2021

*Secondary Education (10th) — 73%*

## SKILLS

- Programming Languages: Java (Core, Servlets, JSPs, Java Beans), Java Selenium, JavaScript, TypeScript, Python (basics)
- Frontend: React.js, TypeScript, TanStack Query, React Router, HTML, CSS, Bootstrap, Tailwind CSS
- Backend: Spring Boot, Spring Data JPA, Hibernate, Spring Mail, Node.js, Express.js, REST APIs, JDBC
- Database: MySQL, PostgreSQL, Prisma, Structured Query Language (SQL)
- AI/ML Tooling: Python FastAPI, Whisper, Sentence Transformers, PDFPlumber, Uvicorn
- Tools: Git & GitHub, VS Code, Microsoft PowerPoint
- Software Skills: Quick learner, Time management, Communication skills, Problem solving

## PROJECTS

**GlowMart – Full Stack Beauty & Skincare E-Commerce Web Application**

Developed a full-stack e-commerce web application for beauty and skincare products using React.js, Tailwind CSS, Spring Boot, Java, and MySQL. Features a modern responsive interface, category-based product browsing, user authentication, REST API integration, and a scalable backend architecture, built with reusable React components and a clean project structure for a smooth shopping experience.

- Skills: React.js, JavaScript, Tailwind CSS, Spring Boot, Java, MySQL, REST APIs
- GitHub: github.com/Sanchithakur08/Glowmart--frontend
- GitHub: github.com/Sanchithakur08/Glowmart---backend

**SmartHire – AI Screening System**
Developed an AI-powered HR screening platform for the company that automates the initial recruitment process by conducting AI-based candidate interviews, recording voice responses, converting speech to text, analyzing resumes, matching candidate skills with interview responses, and generating evaluation scores for HR. Built the frontend using React, TypeScript, TanStack Query, and React Router; the backend using Java, Spring Boot, Spring Data JPA, Hibernate, and Spring Mail; integrated Python FastAPI for AI services using Whisper, Sentence Transformers, PDFPlumber, and Uvicorn, with MySQL for secure data management and candidate records.

- Skills: TypeScript, TanStack Query, React, Java, Spring Boot, Hibernate, Python FastAPI, Whisper, MySQL

**AssetTrack – Asset & Tool Management System**
*React, TypeScript, Node.js, Express, PostgreSQL, Prisma, Tailwind CSS · Deployed on Render*

- Built a web application that tracks company assets — laptops, monitors, furniture and office equipment — across 8 office locations, from purchase to handover to return.
- Added QR code stickers on every asset, so staff can scan with a phone to view details, and a room audit that counts a full room in a few minutes, working even without internet.
- Built the system to serve multiple companies from one application, with each company seeing only its own data, and separate access levels for admins and employees.
- Currently live and in daily use by 20+ employees.

**EduTrack – Student Information Portal**
Developed EduTrack, a web-based Student Management System using Java Servlets, JDBC, HTML, and MySQL. Enables users to efficiently perform CRUD operations — Add, View, Update, and Delete student records — along with secure login and dashboard functionalities.

- Student registration, update, and deletion functionality
- Dynamic table to view all student records
- Login authentication with admin dashboard
- Clean database connectivity using JDBC

## CERTIFICATIONS

**Java Full Stack Developer** 2025
*MITS Academy — Core & Advanced Java backend development along with frontend fundamentals.*

**Python Programming – Basic** 2024
*CACMS Institute — Fundamentals of Python including variables, data types, conditional statements, loops, and functions.*

**Advanced Microsoft Excel** 2024
*CACMS Institute — Excel functions, data analysis, PivotTables, VLOOKUP, charts, and dashboard creation.*
